

1. GUIA SCRUM

<https://scrumguides.org/index.html>

▼ Scrum Definition

Scrum is simple. Try it as is and determine if its philosophy, theory, and structure help to achieve goals and create value.

- The Scrum framework is purposefully incomplete, only defining the parts required to implement Scrum theory. Scrum is built upon by the collective intelligence of the people using it.
- Various processes, techniques and methods can be employed within the framework.

▼ Scrum Theory

- Scrum employs an iterative, incremental approach to optimize predictability and to control risk.
- Scrum combines four formal events for inspection and adaptation within a containing event, the Sprint.
- **The artifacts:**

▼ Transparency

The emergent process and work must be visible to those performing the work as well as those receiving the work.

state of its **three formal artifacts**.

1. Product Backlog
2. Sprint Backlog
3. Increment

▼ Inspection

Scrum provides cadence in the form of its **five** events

1. **SPRINT**

2. planning

3. daily

4. review

5. retro

▼ Adaptation

FAST

▼ Scrum Values

Commitment, Focus, Openness, Respect, and Courage

Compromisso, Foco, Abertura, Respeito e Coragem

1. **Commitment** = *Compromisso*

2. **Focus** = *Foco*

3. **Openness** = *Abertura*

4. **Respect** = *Respeito*

5. **Courage** = *Coragem*

▼ Scrum Team

- The Scrum Team consists of one Scrum Master, one Product Owner, and Developers.
- Within a Scrum Team, there are no sub-teams or hierarchies.
- It is a cohesive unit of professionals focused on one objective at a time, the Product Goal.
- Scrum Teams are **cross-functional**, meaning the **members have all the skills** necessary to create value each Sprint.
- They are also **self-managing**, meaning they internally **decide who does what, when, and how**.
- The Scrum Team is small enough to remain nimble and large enough to complete significant work within a Sprint, typically 10 or fewer people.
- In general, we have found that smaller teams communicate better and are more productive.

- If Scrum Teams become too large, they should consider reorganizing into multiple cohesive Scrum Teams, each focused on the same product. Therefore, they should share the same **Product Goal**, **Product Backlog**, and **Product Owner**.
- for all product-related **activities**: verification, maintenance, operation, experimentation, research and development, and *anything else that might be required*.

▼ Developers

creating any aspect of a usable Increment each Sprint

- plan → Sprint → **Sprint Backlog**
- adapting
- each day

▼ Product Owner

The Product Owner is accountable for maximizing the value of the product resulting from the work of the Scrum Team.

- **explicitly communicating** the Product Goal;
- Creating and clearly communicating Product Backlog **items**;
- **Ordering** Product Backlog **items**;
- **Ensuring** that the Product Backlog is **transparent, visible** and **understood**.

▼ Scrum Master

The Scrum Master is accountable for establishing Scrum as defined in the Scrum Guide.

- Coaching the team members
- Helping the Scrum Team
- Causing the removal of impediments to the Scrum Team's progress; and,
- Ensuring that all Scrum events take place and are positive, productive, and kept within the timebox

The Scrum Master serves the Product Owner in several ways, including:

▼ Scrum Events

The Sprint is a container for all other events.

▼ The Sprint

- They are fixed length events of one month or less to create consistency.
- A new Sprint starts immediately after the conclusion of the previous Sprint.

▼ Sprint Planning

- Sprint Planning initiates the Sprint by laying out the work to be performed for the Sprint.
- This resulting plan is created by the collaborative work of the entire Scrum Team.

1. Topic One: **Why** is this Sprint valuable?
2. Topic Two: **What** can be Done this Sprint?
3. Topic Three: **How** will the chosen work get done?

The Sprint Goal, the Product Backlog items selected for the Sprint, plus the plan for delivering them are together referred to as the Sprint Backlog.

Sprint Planning is timeboxed to a **maximum of eight hours** for a **one-month** Sprint. For shorter Sprints, the event is usually shorter.

▼ Daily Scrum

The purpose of the Daily Scrum is to inspect progress toward the Sprint Goal and adapt the Sprint Backlog as necessary, adjusting the upcoming planned work.

▼ Sprint Review

The purpose of the Sprint Review is to inspect the outcome of the Sprint and determine future adaptations. The Scrum Team presents the results of their work to key stakeholders and progress toward the Product Goal is discussed.

The Sprint Review is the second to last event of the Sprint and is timeboxed to a maximum of four hours for a one-month Sprint. For shorter Sprints, the event is usually shorter.

▼ **Sprint Retrospective**

The purpose of the Sprint Retrospective is to plan ways to increase quality and effectiveness.

The Sprint Retrospective concludes the Sprint. It is timeboxed to a maximum of three hours for a one- month Sprint. For shorter Sprints, the event is usually shorter.

▼ **Scrum Artifacts**

- For the Product Backlog it is the Product Goal.
- For the Sprint Backlog it is the Sprint Goal.
- For the Increment it is the Definition of Done.

▼ **Product Backlog**

single source of work

Product Backlog refinement

▼ **Commitment: Product Goal**

A product is a vehicle to deliver value. It has a clear boundary, known stakeholders, well-defined users or customers. A product could be a service, a physical product, or something more abstract.

▼ **Sprint Backlog**

The Sprint Backlog is composed of the:

1. Sprint Goal (why), the set of
2. Product Backlog items selected for the Sprint (what),
3. as well as an actionable plan for delivering the Increment (how).

The Sprint Backlog is a plan by and for the Developers.

the Sprint Backlog is updated throughout the Sprint as more is learned.

▼ **Commitment: Sprint Goal**

The Sprint Goal is the single objective for the Sprint. Although

is created during the Sprint Planning event

▼ Increment

Each Increment is additive to all prior Increments and thoroughly verified, ensuring that all Increments work together.

Multiple Increments may be created within a Sprint.

The Sprint Review should never be considered a gate to releasing value.

▼ Commitment: Definition of Done

The Definition of Done is a formal description of the state of the Increment when it meets the quality measures required for the product.

Increment. If a Product Backlog item does not meet the Definition of Done, it cannot be released or even presented at the Sprint Review.

Instead, it returns to the Product Backlog for future consideration.

▼ End Note
